

New Disruptive IIoT Technology Swoops into its First Major Show.

Being unveiled at the SPS 2021 trade show **next week** is potentially the world's most powerful IIoT Gateway called quite simply, *IO-GATE*. It comes from IIoT specialists *RoundSolutions*, based in Frankfurt. But how can this new device make such a bold claim amidst a plethora of new technological solutions from some of the industry's biggest players?

Ben Hoelke, Founder of RoundSolutions, a 20-year plus enterprise commented: "IO-GATE is a right-time, right-idea in-house creation that operates as a Plug & Play with a whole host of cool features, yet with one over-riding major benefit: "It's packed with the interfaces you need to take your IIoT project to the next level."

Mazen Jrab, Chief Design Engineer emphasised: "We win only by helping other businesses to be more successful. That's why we're seen as leading specialists in IIoT. As we like to say, we're passionate and slight obsessive about helping our customers succeed."

Frank Bechtloff, Sales Director offered further interesting insights: "With online access to IO-Link sensor data sent from your machines, equipment and buildings, IO-GATE ensures the permanent monitoring of all important operations. Now imagine attaching a camera and connecting the multiple IOs for even greater task performance that you want to trigger. All this... packed in a robust IP67 housing for the most rugged environments."

RoundSolutions is offering Evaluation Kits complete with RoSo Device Management including O2 Telefonica Connectivity. For more information connect with the RoundSolutions Event Team:
SPS Hall 5, Stand 328.
